## **Beauty Reflector for broncolor Ringflash – for even more tender light**

The Swiss lighting specialist is offering a further reflector for the Ringflash C. With the new accessory, the typical Ringflash C light becomes softer and the light coverage angle larger, which can result in reduced contrast. The new Beauty reflector for Ringflash C is a soft light reflector with a titan white inner surface. Because of the matt white surface of the counter reflector, skin colours are perfectly reproduced. The new light is equipped with an UV protecting glass.

A further advantage is the typical high light yield of all the Ringflash versions. The „heavy-duty“ flash tube can be put to work in rapid succession up to 3200 J. Due to these rugged quartz flash tubes and the powerful fan cooling, the Ringflash C is ideal for use with the Beauty reflector for flash series with a great deal of output.

The new reflector is primarily employed in beauty photography, but also people, fashion and still life photographers will be delighted with the new light shaper.

Besides the well-known special effect that the Ringflash produces as main light, it is also gaining more and more supporters as a fill light. Its hard light, but also the light coming from the camera axis, creates perfect visibility of texture even in the most concealed angle.

The new light shaper is available from mid April. Please contact your broncolor dealer for more information. Or visit us at [www.broncolor.com](http://www.broncolor.com)
