

First electronic lens adapter from NOVOFLEX

Canon meets Leica SL

The Leica SL belongs to the high-end cameras within the series of mirror less system cameras. Already at the beginning of this year, NOVOFLEX Präzisionstechnik GmbH Memmingen, Germany, launched – as one of the first manufacturers worldwide – a series of lens adapters, which enable the use of existing lenses with the new Leica SL. The German based accessories specialist is now presenting the first electronic adapter for the use of Canon EF lenses with the Leica SL. Doing so, a couple of electronic camera functions can be transferred to the lens.

For the time being, around 30 EF-lenses and converters are compatible with the new adapter, prime lenses, zoom lenses as well as four tilt-/shift-lenses. Thanks to the new adapter a great variety of high-quality EF-lenses are available for the Leica SL, which also facilitate the switch over to the new Leica SL system.

The new electronic Leica SL adapter – of course „Made in Germany“ – supports the following functions: autofocus, automatic aperture control, AF/MF modus as well as depth of field indication. Moreover, the EXIF data for aperture and focal distance are transmitted.

The Leica SL – presented in autumn 2015 – is the first professional mirror-less system camera on the market. For the first time ever, the electronic viewfinder disposes of the EyeRes technology that Leica developed especially for this camera type. Due to a latency period beyond luminance threshold, a resolution of 4.4 million pixels and a magnification reminding of medium-size format cameras, the electronic viewfinder offers a spectacular new visual experience. Equipped with a 24 MP CMOS full format sensor the Leica SL guarantees outstanding image quality. Due to the high performance processor of the Maestro II series the photographer is in the position not to miss even the most rapid motive, as the camera responds without any time delay to all commands, as it disposes of the fastest auto focus being available on the market for the time being. Thanks to a serial frame speed of up to eleven shots per second with full 24 MP resolution and 4K videos with thirty photographs per second, photo shootings with the Leica SL-system become a brand new experience.

The electronic NOVOFLEX Leica SL adapter is available from now on. The adapter can exclusively be used with the Leica SL.

NOVOFLEX adapters are available for nearly any camera/lens combination. For more details please refer to the adapter finder on the NOVOFLEX home page www.novoflex.de.
