MobiLED – a world innovation

The company, broncolor, presents the first lamp worldwide with 30 W LED modelling light. This output corresponds approximately to a 100 W halogen lamp and is unique on the market in this form. The LED technology promises a longer service life as well as energy conservation – spot-on for mobile application. Also the colour temperature of 5500 K (daylight) opens up completely new horizons for the production of video sequences.

The MobiLED lamp was developed to match the Mobil A2L power pack: it is remarkably compact, weighs very little, and has an excellent price/performance ratio. The protective cap can be quickly converted to be an umbrella or standard reflector. MobiLED features a pan/tilt head for one-hand operation and an integrated umbrella holder. The intelligent cooling system only switches on when the service temperature reaches a threshold level. Thanks to its innovative design, the MobiLED stows away compactly for transport and storage.

The newly introduced continuous light mode of Mobil A2L allows the MobiLED modelling light to be used as a new light design means. Precisely because the colour temperature of 5500 K is daylight conform, entirely new possibilities are offered for film sequences.

Because of the well-known broncolor bayonet locking device, the MobiLED is compatible with the comprehensive range of broncolor light shapers and accessories. The lamp is equipped with a release button that allows quick reflector changes and 360° rotation.

MobiLED continuous light adapter

With the combination of MobiLED lamp, Mobil A2L charger, and the newly developed continuous light adapter, it is possible to use the modelling light independently of the power pack. Just the solution to fulfil the increased demands of the customers.

Operating the MobiLED directly on the mains supply, a separate video sequence can be produced in addition to the photo shooting. Mobility without limits!

Mobil A2L Travel kit

The new Mobil A2L power pack and MobiLED in a team

The Mobil A2L Travel kits are available in the following two versions:

Mobil A2L Travel kit lithium 31.023.XX

consisting of:

- 1 Mobil A2L with lithium battery
- 1 charger for lithium battery
- 1 MobiLED
- 1 sync cable
- 1 MobiLED continuous light adapter
- 1 Light bag

Mobil A2L Travel kit lead 31.022.XX

consisting of:

- 1 Mobil A2L with lead battery
- 1 charger for lead battery
- 1 MobiLED
- 1 sync cable
- 1 Light bag
