

PermaJet

PROFESSIONAL INKJET MEDIA

INKJET MEDIA PRODUCT GUIDE

PermaJet PROFESSIONAL INKJET MEDIA

Founded in 1983 by Robin Whetton and celebrating its 30 year milestone, the original business of manufacturing darkroom equipment still continues, though the company has diversified heavily and now has three strategic cores.

With the proven technical experience and knowledge gained in both the darkroom and digital printing environments, Robin pioneered the development of the professional range of inkjet papers that we know today as PermaJet.

The PermaJet range of high quality inkjet papers includes something for everyone, from the powerful Gloss, Oyster, Ultra Pearl and Matt Plus to the huge variety of Fine Art and Double Sided Media.

In 2005, PermaJet were instrumental in the launch of the first Digital Fibre Base/Baryta materials which emulate the traditional darkroom printing

material. We have seen many companies follow this lead but PermaJet still holds massive market share and will continue to utilise its knowledge base to push the boundaries of this technology.

Also in 2005, The Imaging Warehouse was formed to bring together the three businesses PermaJet, Nova Darkroom Equipment and NovaJetPro under one operating entity. The structure and skills of all three businesses compliment each other and have resulted in an efficient highly skilled operation that can react to customer demands and world technology changes.

DIGITALPHOTO

The best-selling range of popular high quality photo papers aimed at digital photographers, graphic designers and commercial labs wanting to produce outstanding sharp digital images time after time. PermaJet offers the whitest base materials on the market, delivering a remarkable clean bright finish coupled with a true photographic look and feel. Whether you decide to work with the rich Gloss, glorious Oyster, Ultra Pearl or the ultra smooth Matt surfaces, this range is perfect for all your digital photo needs.

This exceptional range has won many awards for its quality, and lightfastness when used with either dye or pigment inks, confirming its high acceptance as a quality standard compared to similar papers on the market. The very latest manufacturing techniques guarantee the printed results exceed the expectations and demands of today's digital photographers in areas such as wedding photography, portraiture, landscape or general snapshots.

All types are available in A4, A3, A3+ or A2, and roll formats from 13" through to 60". All 13" rolls are supplied with a 2" core. All other rolls are supplied with a 3" core.

PermaJet have listened to their customer requests in 2011 and are pleased to announce the launch of 36" (916mm) x 30m roll lengths in the popular Oyster 271gsm & Ultra Pearl 295gsm surfaces. This now allows wide format users the opportunity to print perfect A1 size with minimal wastage.

"Hi Ian, Just to let you know the profile is working perfectly & will be putting in more orders for PermaJet paper soon. We have now decided to stop using Ilford paper & move completely over to PermaJet. Many thanks"

Ian Staton - Vif Images

GLOSS 271

A superior, heavyweight, 271gsm high gloss media with a true photographic feel and finish. This is definitely the whitest base gloss paper on the market. An instant dry resin coated paper finished with a UV protected microporous supercoat giving it a high degree of water and fade resistance. Compatible with both dye and pigment inks.

A very low colour error and metamerism index makes this product suitable for both colour and monochrome images.

Why choose this? Ideal for all types of printing output where a really high gloss is required.

Gloss 271 and Oyster 271 products are available in 6", 8" and 10" Dry Lab Rolls. Call us for details.

OYSTER 271

An Oyster/Pearl surface with a 271gsm photographic weight, texture and finish. Manufactured to be the whitest base Oyster/Pearl paper on the market with its instant dry, resin coated surface and a UV protected microporous supercoat. It has a high degree of water and fade resistance and works perfectly with dye and pigment inks. The exceptional demonstration of all colours and tones makes this product suitable for both colour and monochrome images.

Why choose this? The extra UV protection from the microporous supercoat and its representation of vibrant colours make this the obvious choice for any photographer, graphic artist or photo print lab.

SMOOTH PEARL 280 NEW

PermaJet Smooth Pearl has a luxurious pearl/lustre finish on a heavyweight base of 280gsm. This inkjet paper has been developed with a warm base tint to emulate the texture and finish of the old Ilford Galerie Smooth Pearl which recently ceased production and is the ideal replacement.

This resin coated paper is finished with a UV protective, microporous supercoat giving it a high degree of water and fade resistance.

Recent independent tests concluded that the product exhibits remarkable similarities to Ilford Smooth Pearl but in some areas actually exceeded the qualities in colour rendition, a lesser OBA content as well as a low metamerism index. The similarities are borne out by the fact that you can use your existing Ilford Smooth Pearl ICC Profile with it and get a brilliant result!

With its exceptional Dmax reading, this product will produce vibrant colour images and monochrome images with stark definition and tonal range whether you are using dye or pigment inks in your printer.

Why choose this? With its exceptional D-max reading, the pronounced pearl finish will produce warm, vibrant colour and monochrome images with stark definition and tonal range – 100% compatible with both dye and pigment inks in your printer.

Also available in Smooth Gloss 280. Call for details.

Industry expert quotes... "The new PermaJet Smooth Pearl 280 is a superior replacement for the Ilford Galerie Smooth Pearl which it outperformed on 29 of the 30 parameters we normally table."

Mike McNamee FRPS FBPPA – Editor, Professional Imagemaker

TITANIUM LUSTRE 280

PermaJet's new metallic inkjet paper offers something radically different. Titanium Lustre has a beautiful pronounced textured finish on a heavyweight 280gsm base.

This new photo paper truly resembles the look, feel and print quality of a true metallic surface. Incredible detail and clarity is achievable delivering stunning high resolution visual impact and making your images just jump off the paper with the dramatic metallic appearance.

A material that has a great tonal range, wide colour gamut and a high D-max rating which will work extremely well with images that have vibrant colours, deep blacks and shiny white/silver areas. Ideal for images containing reflective metal surfaces such as chrome, silver or even gold and everyday objects such as watches, jewellery, glass, mirrors – the list is endless!

Why choose this? For all monochrome workers, try printing your black and white images on this surface - you will not believe what you can achieve in the tonal highlights and greys. And, if you print HDR images on this surface, you have just taken your print output to another level altogether!

The instant you see and feel this material you will know that it is a true quality metallic paper with a real difference. Try some today!

ULTRA PEARL 295

A highly pronounced pearl surface with a 295gsm photographic weight, texture and finish. The Pearl finish is like the finish on a traditional lab Crystal Archive paper. The instant dry, highly scuff resistant surface has a UV protected layer, making it an extremely tough microporous material which provides a high degree of water and fade resistance. Compatible with dye and pigment based inks and ideal for colour reproductions with a superior heavyweight. No lamination required and incorporating an anti-scan surface layer.

Why choose this? A must for all photographers, studio labs or graphic artists who require a highly robust image protection layer with a difference. Exceptional Dmax of 2.37 tested by Professional Imagemaker (Mike McNamee).

MATT PLUS 240

A clean, white, matt paper with ultra image sharpness and a really smooth surface. At 240gsm, the extra weight gives this paper a sumptuous feel and appearance as well as deep and crisp colours. The low metamerism shown on this paper gives it high credentials for the monochrome specialist.

Why choose this? This beautiful white matt paper is used widely amongst photographers, design labs and consumers who are attracted to the smooth matt base. Suitable for a whole range of applications from monochrome reproductions to colour repro work such as flyers.

Why not try all of these paper types in a PermaJet Test Pack? See page 23 for details.

TRADITIONAL BARYTA

PermaJet are the first company to have developed and launched a special collection of digital inkjet papers highly reminiscent of tried and tested Fibre Based Baryta papers.

Each paper replicates the original silver halide feel and appearance with traditional darkroom qualities. With several D-Max ratings exceeding 3.0 on the scale, you will be able to provide black and white tonal ranges beyond your expectations.

This award-winning selection allows you to take your printing to the very next level. Image reproduction will surpass your requirements in all areas and provide you with finished images that meet the highest standards which can be displayed with pride in any gallery.

Creating images with a complete tonal range as well as sense of depth is as important to Black and White printers in the digital world as it was in the darkroom. So, photographers who spent their days in darkrooms will appreciate the natural heavyweight feel and amazing similarities of the paper bases to the likes of classic papers such as Agfa Record Rapid Baryta. The very highest quality fine art photographic reproductions can be created from the wide choice of surfaces - Gloss, Matt to a glorious Pearl finish, all with the wonderful texture and feel of the original darkroom papers.

The natural fibres and specialist coatings that have been used in their manufacture are dye and pigment ink compatible and offer a very high level of scuff and water resistance on the surface whilst delivering remarkable image density and definition throughout.

A truly modern classic range that is the perfect replacement for traditional darkroom papers in an inkjet form.

PUSHING THE BOUNDARIES OF INKJET PRINTING TO REPLACE THE DARKROOM WORLD

FB GOLD SILK 315 **NEW**

PermaJet FB Gold Silk has a sumptuous silk /satin finish on a fine art heavyweight base of 315gsm. This inkjet paper has been developed with a natural, warm base tint to emulate the surface finish, texture and coating of the old Ilford Galerie Gold Fibre Silk which recently ceased production, making it the perfect choice as its replacement.

In order to match traditional darkroom silver halide paper, the smooth coating has been applied directly onto a true baryta layer and fibre base enabling its users to create intense, velvety blacks and creamy whites – the perfect combination for outstanding portraiture and landscape reproductions, whether in monochrome or colour.

Why choose this? The perfect replacement to the Ilford Galerie Gold Fibre Silk enabling existing users to use their current ICC profiles seamlessly. Use this to create digital work indistinguishable from an original darkroom fibre based print. Present your monochrome images in their full glory.

FIBRE BASE GLOSS 295

Brett Florens

An excellent 295gsm Fibre Base material with a natural white, acid-free base and subtle undulations. The multi-layer technology delivers the highest colour gamut achievable with pigment inks. Its consistent gloss surface and heavyweight base offer exceptionally high D-Max for both colour and monochrome reproduction.

Why choose this? A paper modelled on traditional fibre based baryta materials used in conventional darkroom photography. The surface and weight feels as close to any traditional Fibre based papers on the market and offers the truly perfect answer to your black and white as well as colour reproduction requirements.

“The arrival of something that looks so like silver halide...The look and feel was very much that of a traditional print and set us off... Skin-tone accuracy and overall grey accuracy are the best we have ever achieved under any condition with any paper/ink combination. Dmax of 2.2 and smudge resistant.”

Mike McNamee FRPS FBPPA - Editor, Professional Imagemaker

“Winner of the Portrait category...Fibre Based Gloss 295 has a tremendous D-Max that offers monochrome workers like myself the ability to produce high quality prints with a depth of tone I have not seen since my ‘darkroom days’. Well done PermaJet.”

Ray Brammall ARPS, DPAGB - Yorkshire Photographic Union.

FIBRE BASE GLOSS WARMTONE 295

Fiona Alison

A 100% natural cotton 295gsm base, acid-free and with no optical brighteners giving a 10 point warmer base than the Fibre Base Gloss. It produces fabulously rich, smooth blacks countered by delicate creamy highlights to give a wonderful tonal range. Being slightly warmer than Fibre Base Gloss but with the same finish and weight makes it the perfect paper for both landscape and portraiture.

Why choose this? Where you have a need for a fine art museum quality paper that has been designed to emulate a warm tone base similar to that of a traditional paper. Its microporous gloss surface is ideal for the fine art photographer wanting to reproduce photographs utilising inkjet giclée technology. A perfect fibre based baryta paper with a warmtone gloss base mainly for black and white applications.

“Spectacularly good for skintone accuracies...Saturation of the skin tones is maintained by the cream paper...Both portraitists and traditionalist monochrome workers are going to like this... If you like a warm print then this material does the business.”

Mike McNamee FRPS FBPPA - Editor, Professional Imagemaker

FIBRE BASE ROYAL 325

Kodec

The ultimate in smooth gloss, heavyweight 325gsm fibre based media. Its whiter base and ultra smooth finish offers superior results in all areas of the image. The special back coating process enhances flatness and print feeding. The multi-layer technology ensures the most brilliant colours and fade resistance. exceptionally high D-Max with pigment inks makes it ideal for colour and monochrome reproduction.

Why choose this? The subtle gloss and very smooth, white base that has been carefully developed to create a real fibre based winner. The heavy weight construction feels as close to any traditional Fibre based papers compare this product to another on the market seems almost insulting. A truly unique finish and quality makes this a truly wonderful fibre base material.

“325gsm media with a back coating...now you can get the best of both worlds, the smooth paper is stiff... Overall the FB Royal squeezed the gamut volume to a new record high for this class of material, creating high Dmax.”

Mike McNamee FRPS FBPPA - Editor, Professional Imagemaker

FIBRE BASE MATT 285

Susan Brown

An ultra smooth, 285gsm acid-free matt surface, bright white paper with the feel and appearance of a traditional double weight fibre based paper with similar rigidity. It has a high gamut volume with pigment inks and emits a low level of metamerism making it a great paper for monochrome images.

Why choose this? A fibre based matt surface designed with a high quality double weight feel and appearance. Another paper which has all the required credentials for a monochrome specialist. This superb matt fibre paper is the perfect Matt alternative to conventional silver-halide darkroom paper. When printing modern art or landscapes... the Fibre Base Matt fits the bill nicely.

"Overall this was excellent and we have become quite a fan of Delta during the various tests we have conducted through the year. Dmax is excellent and the greens, yellow-greens and foliage were star performers, resulting in very good landscapes. This is another paper which has all the required credentials for a monochrome specialist. If you need the brighter, coolness of a paper with OBA's for reproduction of modern art, the Fibre Base Matt fits the bill nicely."

Mike McNamee FRPS FBPPA.
Editor, Professional Imagemaker

Best Matt Paper 2010
"If you are after an instant drying matt paper that produces stunning mono prints this is a great option"

PHOTO ART PEARL 290

Vikki Boulter

A superior coated fibre art media of 290gsm with a Pearl/Lustre finish. The alpha cellulose base is lignin free and pH neutral. It is internally buffered to enhance fade resistance from any changing ozone effects. Exceptionally high D-Max with pigment inks making it ideal for colour and monochrome reproduction. For best results use photo black ink.

Why choose this? A wonderful fibre based paper that has a glorious pearl/lustre finish. Highly suited to the photographer who is in need of a media that is reminiscent of the true darkroom equivalent. Rich colours and tones and deep blacks jump off this paper.

DIGITAL TRANSFER FILM 165µ

Mike Jones

NEW ULTRA CLEAR BASE! A specialist 165µ clear film aimed at the photographer wanting to truly combine the world of darkroom with digital, allowing the creation of perfect 'digital negatives/positives'. The ink receiving layer works well with dye and pigment inks and dries quickly. This water-resistant film reproduces high detail and image clarity. Fully compatible with ultra chrome pigment inks, new and improved fast drying coating technology enabling maximum black density with pin sharp results every time!

Why choose this? A darkroom/digital printer's delight! At last a film 100% ideal for 'contact printing' onto traditional darkroom papers or, when backed with white card, produces a result that is highly comparable to a printed Ilfochrome image.

Tested and used extensively by Tim Rudman & Chris Woodhouse. Tim is well known for several books on black and white printing, lith printing and toning processes. As a photographer and printer his work has been exhibited widely around the world, gaining numerous awards and distinctions. The highest accolade making this product worthy of use on your own printer. Try it for yourself today.

"The results were encouraging, good Dmax on the film. Being a clear film, it did not require clamping to the paper and gave sharp results. The film took a lot of ink without bleeding, using a standard glossy paper media setting, achieving smooth highlight transitions. It also did not show any signs of banding, which had plagued my A2 printer and I can see it would be useful for my astronomical photographs, where I think it may well be used with some advantage (less ink too!) Looks like you have a winner."

Chris Woodhouse – Way Beyond Monochrome.

FIBRE BASE DISTINCTION 360

A triple weighted, bright white paper with an acid-free fibre base (baryta) which takes your print quality to the next level. The 360gsm triple weight feature imitates the traditional look and feel of a true Baryta paper and provides an almost 3D quality to many printed images.

This premium, high white gloss, baryta paper guarantees the full archival stability standard you have come to expect from the PermaJet Fine Art range of 100% alpha cellulose coated materials.

Why choose this? Perfect to achieve images with excellent detail and a great deal of shadow depth, substantial image density, an extensive colour gamut range or unsurpassable black and white with tremendous Dmax.

"For those who are unfazed by OBAs and prefer a cool print this paper is an interesting and valuable expansion of the PermaJet range. Its headline characteristics are its high Dmax and cool rendering. This would suit sport, fashion, news and reportage images the most, female portraiture. We like the feel and surface texture a lot, even the smell of the surface invokes memories! So if you fancy looking distinctive you should give this paper a try."

Mike McNamee FRPS FBPPA. Editor, Professional Imagemaker

at Amateur Photographer*

SMOOTHFINEART

PermaJet's flagship range of fine art papers with smooth surfaces which demonstrate the exceptional qualities of inkjet printing when you use the very best materials

These award-winning papers take your printing to the very next level. The image reproduction will surpass your expectations in all areas and provide you with finished images that meet the highest standards equivalent to Museum quality Giclee prints. PermaJet have taken the most advanced coating technology one step further by applying it to a range of specially developed, acid-free, smooth paper and cotton rag bases.

Photographers and artists will appreciate the natural heavyweight feel and smoothness of the paper bases as well as their subtle varying base colours which bring your images to life and add a sense of depth and clarity which cannot be demonstrated by the usual resin coated type gloss or semi-gloss papers. All the Smooth

surface fine art papers are 100% compatible with both dye based and pigment inks and guarantee the longest display life possible because of the acid-free cotton and natural fibres that have been used in their manufacture. They offer a very high level of scuff and water resistance on the surface whilst delivering remarkable image density and colour definition throughout.

PROFESSIONAL REVIEW

"The paper, its wonderful, very heavy and dense, laying flat for mounting with a smooth surface like velvet. It makes prints which feel as if they are worth paying for.

The colour is just a touch ivory and the ink densities achieved are so high you can shine a light through the back of the sheet and see a perfect image."

David Kilpatrick FBIPP AMPA
Editor, Master Photo Digital Magazine

AWARD-WINNING PAPERS THAT TAKE YOUR PRINTING TO THE VERY NEXT LEVEL

PORTRAIT WHITE 285

Featuring the characteristics of Portrait 300 but with a whiter base. This 285gsm acid free, smooth and highly calendered paper gives a wonderfully lively feeling to portraiture. Reproductions will exhibit a high Dmax and wide colour gamut making it particularly suited to the subtlety of complex skin tones. 100% Alpha Cellulose.

Why choose this? Portrait White, with its classical smooth finish has been manufactured for photographers who intend to reproduce portraiture. If you are looking for a superb fine art paper that has a whiter base and represents the texture of skin tones, as well as excellent highlights and shadow detail, than look no further - this is the paper for you.

PORTFOLIO 220

The lightest weight fine art paper that we make. It is a 100% cotton rag base, 220gsm and totally acid free. The base has a natural, slightly off-white appearance and replicates colours with great depth and clarity.

Why choose this? An ideal paper for a print studio or framer. The lighter weight, smooth single-sided, 100% cotton rag base is the perfect fine art paper to handle and manage, whether you wish to use this paper to create personal portfolio work, invitation cards or simply for final digital output.

PORTRAIT 300

A classically smooth, mould-made, 100% cotton rag base. This is the heavyweight version of Portfolio at 300gsm - a totally acid free and highly calendered, off-white art paper. Smooth skin tones and a wide monochrome tonal range can be achieved. Metamerism figures are exceptionally low and Dmax is amongst the best recorded, making this a paper you just have to try.

Why choose this? This has become the social wedding and portrait photographers stock product. A beautiful natural smooth fine art paper that is made of 100% cotton rag, ideally suited for the photographer who needs a heavy weight archival paper. High contrast and detailed shadow areas, an excellent choice for the professional fine art printer.

PORTRAIT VELVET 310

A 100% white 310gsm cotton rag base with an ultra smooth surface that has all the characteristics of our popular and successful Portrait 300 and Portrait White 285 product. The moment you pick up this beautiful velvet smooth surface you immediately appreciate the paper for what it is, a wonderful fine art product that exhibits an extremely high Dmax making it ideal for monochrome as well as colour reproductions.

Why choose this? If you require a product that has a super smooth surface with a velvet like finish whilst having the need to reproduce portraits then this is a perfect stock paper with a difference. The touch and feel is quite unique than any other fine art paper on the market whilst the coating technology that has been incorporated creates stunning tones, shadow detail and highlights.

Try this all new ultra smooth fine art paper with a velvet feel that you will not be able to resist.

"There are many 100% cotton rag papers on the market but in my opinion nothing that matches the performance of Portfolio in terms of quality and durability. This is a first class paper that we use for all of our wedding fine art prints"

Stewart Randall, Wedding Photographer www.randallweddings.co.uk

Why not try all of these paper types in a PermaJet Test Pack? See page 23 for details.

OMEGA 310

David Chow

A 100% smooth cotton rag media with an acid free enhanced white base. The 310gsm highly calendered smooth surface has greater rigidity and holds high-key colours to an exceptional standard. Maximum black, low metamerism and high gamut volume make this a paper suitable for a wide range of applications.

Why choose this? Suited for landscape and portraiture photographers who intend to work with a heavyweight, high white and smooth surface that can re-create complex colours and deep blacks without compromise. Works extremely well with images that have a lot of detail and shadow, retaining a wide colour spectrum and replicates image vibrancy whether you are working in colour or black and white.

ALPHA 310

*OBA FREE SURFACE

Rikki O'Neil

A 100% natural smooth cotton rag media with an acid free natural white base providing the feel and appearance of traditional art material at 310gsm. It has a high gamut volume and exceptional ability to display vibrant colours. The natural base white holds great image depth and detail.

Why choose this? Highly suited towards landscape and portraiture photographers who intend to work with a rigid, warmer base material with a very smooth surface. Re-creating complex colours and perfect deep blacks is a great reason to use this paper. Lots of highlight detail and shadow is retained enhancing your landscape and portraiture work, whether you are working in colour or black and white.

*This material has answered the needs of our customers to fulfil the longevity of their fine art prints maintaining the desired look. The warm base provides users with a stable platform on which to print fine art reproductions without colour shift issues that fine art surfaces from other manufacturers may experience, so for all those who wish to print with a consistent material that has no OBA's then look no further, the Alpha 310 is a perfect fine art product for accuracy!

SMOOTH ART SILK 300

Susan Brown

A really special, 300gsm acid free smooth art paper with a unique ink receiving layer that exhibits a silk/gloss print. This superb coating is undetectable on the surface until the ink is applied, and then bursts forward with a subtle yet vibrant silk sheen. The surface provides a high depth of colour vibrancy and is resistant to scratches. The art silk is tough making this paper ideal for many applications.

Why choose this? Are you a photographer requiring a smooth art paper that delivers a little extra sparkle to your prints? Create silky finished art/photography in a modern but unusual form with the help of the paper's unique finish. If you are after an art paper with a difference then this is for you. Suitable for all reproductions of landscape, wildlife and creative art as well as portraiture.

Works well with black and white reproductions. The subtle silk sheen creates extremely deep blacks within the shadow detail with a wonderful finish to the overall print.

TEXTURED FINE ART

An award winning collection of fine art textured surfaces offering you image reproduction at the same standard as museum quality giclee prints.

Developing a range of the very highest quality fine art papers requires the implementation of the most advanced coating technology. PermaJet have taken that technology one step further by applying these advanced coatings to a range of various acid-free, textured bases.

The use of these superb textured papers means that you can now bring your images to life and add a sense of depth and clarity which cannot always be expressed by smoother papers. The varying nature of the textures gives these art papers a very high level of scuff-resistance on the surface whilst delivering remarkable image density and colour definition throughout.

There is no doubt that you will find choosing a textured surface fine art paper so much easier as you know that only the very highest quality cotton and natural fibres have been used to manufacture this range.

Couple these papers with our FREE custom profiling service and you will enjoy a level of reassuring consistency throughout your image making process and meet the highest digital inkjet standards and demands of today.

PROFESSIONAL REVIEW

"The Museum is an excellent paper, regarded very highly by our clients, particularly by artists who work in watercolour, gouache and acrylic. They appreciate the subtle texture and feel, we like it for its consistency."

Giclee UK Ltd. Fine Art Printers & Photographers - Edinburgh

ARTIST 210

David Chow

A 210gsm canvas-like textured art paper with an off-white base. Made with 50% cotton rag, the base is pH neutral and mould made. Ideally suited to Artists' watercolour work or the output of a photograph in which you wish to achieve a subtle artistic impression. It has a very high gamut volume for an art paper.

Why choose this? Artists appreciate this beautiful natural paper for what it is, a wonderful open canvas base structure. A perfect textured art paper to reproduce your watercolour, paintings and artistic impressions. An absolute must for all artists.

MUSEUM 310

Christine Widdall

A slightly textured, 310gsm off-white, sumptuous art paper. Mould made, pH neutral and a high gamut volume with low colour error makes this the choice of most Fine Art print labs and Museums/Galleries. The surface is highly suited to landscapes, wildlife and pictorial images.

Why choose this? As the name suggests, a wonderfully subtle textured mould made art paper that has all the fine art attributes for Museum standard printing. Ideal for galleries, museums and photographers who intend to create Fine Art prints in colour with a high degree of fade resistance.

PARCHMENT 285

Irene Froy

A highly calendered, 285gsm white base with an undulating surface, emulating the rigidity, texture and feel of a true parchment. The uneven surface adds image shadow and movement. A high Dmax rating and acid free base means it is suitable for a wide range of image effects, cloud, smoke, sand or landscape and widely used for producing invitations or certificates.

Why choose this? The artist, photographer and cardmakers can create quality prints, invitations and certificates with depth and dimension. With its beautiful feel and structure, Parchment will add a sense of movement to your image, creating life in a still format.

PAPYRUS 300

Ann Miles

A rough textured 300gsm surface with a lot of character. Its off-white base is made of 100% cotton linters producing a pH neutral material with a very sumptuous feel and rigidity. Used very extensively in the reproduction of art images and pastel orientated Fine Art photographs.

Why choose this? Are you working with fine art images and pastel shades of colour? if so then this highly sort after textured art paper, delivers a modern feel to your fine art reproduction work, whether you an artist or photographer, the Papyrus will deliver character in every sense.

DOUBLE-SIDED MEDIA

Using a double-sided inkjet paper can open the door to a whole new world of creativity

The PermaJet collection of high quality double-sided fine art, smooth and digital photo papers are suited to portfolio, presentational applications, booklets, specialist cards, wedding albums and more. The specialist range offers the photographer, graphic

designer and student endless possibilities in creating low and high volume books, cards and albums in a variety of textures and finishes. Sheet sizes range from A4 through to A2.

The surfaces vary and are unique in look, feel and texture and have been manufactured using the most advanced and traditional processes.

All the double-sided range of papers are compatible with both dye and pigment based inks, providing beautiful, neutral colours and outstanding image sharpness that is suitable for all your double-sided applications.

PORTFOLIOS

POSTCARDS

"I often have the need to use a good quality double-sided product i.e. for personalised calendars and small-run publications etc. I have tried most of the PermaJet range and one of my own personal favourite papers has to be the Double-Sided Oyster which suits my images perfectly.

The saturation and colour vibrancy seems to make my photographs jump off the page. This paper, along with my trusty Epson R2880 and Pro 3800 with the PermaJet Eco-Flo systems are a perfect combination"

*Bob Moore
Hon.FRPS,Hon.PAGB.MPAGB,FIPF*

DS MATT 250

A new heavier weight purposely improved for card making. An ultra white improved, smooth matt surfaced paper with ultra image sharpness. At 250gsm the extra weight gives this paper a sumptuous feel and appearance. The exceptionally low metamerism in this paper gives it high credentials for the monochrome specialists.

Why choose this? A perfect, cost-effective stock product for monochrome workers, graphic designers, card makers and students who need a double sided bright white matt paper, ideal for black & white reproductions, graphic and design applications, greeting cards and portfolio presentations.

DS OYSTER 285

Double-Sided Oyster complements the single sided version by bringing one of our most successful papers into the double sided market. This product shall be packaged in our current Oyster box with a Double-Sided Oyster label. Double-Sided Oyster 285gsm has an Oyster/Pearl textured surface with a true photographic feel and finish and ultra-white base. This instant dry, microporous, resin coated paper has a high degree of water and fade resistance. Compatible with Dye and Pigment inks. An ideal product for use in portfolios, low volume books.

Why choose this? If you are a photographer, graphic designer or student wanting to work with a true white base material that allows you to create portfolios, calendars, graphical presentations, cards and books with well saturated and smooth colours. It produces high contrast and detailed shadow areas, an excellent choice for the professional printer.

DS PORTFOLIO 230

A 100% cotton rag which is acid free and pH neutral. The soft texture of the natural white matt base can replicate the kind of quality you expect from a printed book. High detail can be captured as well as exhibiting a high colour vibrancy on this 230gsm paper.

Why choose this? The need for a true cotton rag media with excellent archival qualities means this product is the perfect material for applications being regularly exposed to handling and viewing.

A Fine Art paper that is perfect for the more discerning printer looking to making albums or books.

DS PORTRAIT 300

This highly calendered, 100% cotton rag, smooth paper is the big brother to Portfolio. Natural white in appearance and coated on both sides, the heavy weight of 300gsm and soft touch give a classic high quality look. The ink receiving layer and surface preparation ensures smooth skin tones and a wide monochrome tonal range can be achieved.

Why choose this? A beautiful fine art paper that is ideal for output where museum archival quality is required as well as the double-sided option. The 100% cotton rag is the perfect stock product for all photographers who desire to create and produce professional portfolios, limited books and albums with a difference or wish to use this paper to create personal portfolio work, invitation cards or simply for final digital output.

INKJETCANVASES

Printing with inkjet canvas to produce exquisite works of art is now as easy as using standard papers. You could be hanging one of your own 'Old Masters' style canvas images on your wall within minutes.

PermaJet has developed this collection of high quality canvases, not only suited to passing through many modern printers, but also exhibiting the expected strength and water resistance usually only associated with a traditional artists' canvas.

All the canvases are compatible with both dye and pigment based inks, providing outstanding colour intensity and image sharpness.

Artists, photographers & fine art reproduction houses will appreciate and value the unique look, feel, choice of textures and durability of this range.

This is further enhanced by the unique availability of the whole range in A3+ cut sheets as well as 13", 17", 24", 36" and 44" rolls.

WELCOME TO A RANGE OF INKJET
CANVASES THAT ARE OUT OF THIS WORLD!

NEPTUNE NATURAL MATT CANVAS 400

A textured 400gsm single sided 100% cotton base matt canvas with a natural warm surface, suited to artists who want to reproduce vivid colours and impressions, rich and intense oranges, yellows and greens can be created. The special ink receiving coating is water resistant, making it suitable for printing watercolours, paintings, wildlife or simple artistic impressions. The real canvas structure base has been manufactured with random and uneven cotton fabric content, perfect for printers looking for a non-consistent canvas finish with a natural appearance. Exceptional with dye and pigment inks. An ideal canvas for stretching around bars, enabling the creation of a traditional or contemporary boxed frame. Previously known as *Artistic Canvas*.

Why choose this? A material that allows you to create and emulate a painting or artistic image in a digital format, the uneven heavyweight textured base is visible and flexible (non-cracking) allowing the canvas to be perfectly stretched for boxed framing.

CODE	SIZE	PACK	EX.VAT	INC.VAT

APJ23288	44" Roll	12mtr.	£169.13	£202.95

“Good statistics for a matt media and much improved by the application of a coat of varnish with almost an extra stop being added to the Dmax. For a brightened media the skin tone accuracy is notably good. The metamerism is particularly low, a bonus for the monochrome specialist. A good set of data all round, a nice new media with especially bright characteristics and a varnish that matches anything we have tested to date – buy it and try it!”

Mike McNamee FRPS FBPPA – Editor, Professional Imagemaker

JUPITER MATT CANVAS 350

A subtle 350gsm textured natural white matt canvas-like structure, suited to the digital photographer. The undulating polyester/cotton base and highly developed ink receiving layer provides a wonderful tonal range across the colour spectrum that is fantastic for the reproduction of photographic images. Previously known as *Photo Matt Canvas*.

Why choose this? Anyone wanting to create outstanding reproductions on a broad textured matt canvas surface suited to high quality photo printing. Including this in your media selection will enable you to produce perfectly neutral and balanced matt photographic prints ready for stretching.

INKJET CANVAS

SATURN SEMI-GLOSS CANVAS 350

Mariann Laugesen

A subtle 350gsm textured semi-gloss/satin canvas-like structure, suited to the digital photographer intending to create high colour intensity and detail. The instant dry coating and stiff natural white polyester/cotton base properties perform exceptionally well giving depth, contrast and sharpness to a wide range of photographic subject matters. Previously known as *Photo Semi-Gloss Canvas*.

Why choose this? If you are looking for a vibrant semi-gloss/satin canvas with a broad texture that is durable, but at the same time able to produce stunning vivid coloured canvas prints for photographic applications.

This product contains no OBA's and meets with the standards of the Fine Art Trade Guild guidelines, suitable for museums and fine art workers who are in need of a neutral base canvas without optical brighteners

MERCURY ULTRA WHITE MATT CANVAS 405

Anne Leven

The latest addition to the popular PermaJet canvas range has now arrived - Mercury Ultra White Matt 405gsm. A smooth, heavyweight product with a beautifully structured base which has been proven as being the most brilliant white in the marketplace to date. Carefully designed to facilitate the reproduction of fine art work where image sharpness detail is crucial and excellent colour brilliance and image depth is a necessity.

Its heavyweight feel and true, ultra white matt base makes it an ideal inkjet canvas for a variety of subject matters bringing your image to its maximum printed display potential, standing out and almost 'jumping off' the media. The perfect canvas for the professional photo studio lab, fine art printer or museum needing an inkjet media with a real difference - able to out-perform any other canvas on the market. Suitable for all types of printers, whether they be large format or desktop and using either aqueous pigment or dye based inks.

This canvas grade is now Latex ink compatible. We would strongly recommend using one of the PermaPROtect range of varnishes to increase image density and archival resistance - you will be truly amazed by the stunning results.

Why choose this? If you are looking for an ultra bright white based media with true canvas structure to create fine art reproductions, paintings or murals in a digital format, this fine textured matt canvas is perfect for your application. The non-cracking base will enable the canvas to flex perfectly around stretcher bars, creating a modern or contemporary boxed frame with a twist.

Always varnish your canvases with the PermaPROtect range of varnishes to enhance your artwork but more importantly protect them from UV pollutants and yellowing.

CANVAS VARNISHES

PERMAPROTECT VARNISHES **NEW**

PermaPROtect
Fast Drying Canvas Varnish

PermaJet are pleased to introduce a range of professional fast drying canvas protective varnishes, available in Gloss, Satin and Matt finish.

All canvas users are strongly advised to protect their final digital canvas prints with one of the fantastic PermaPROtect canvas varnishes, essential for preserving from dirt, UV ink fading, airborne pollutants, abrasion as well as fingerprints.

Specially formulated to increase the lightfastness of all your digital canvas prints adding saturation, improving colour gamut and increasing the density of the blacks. Can also be used with fine art inkjet papers giving a greater degree of water and fade resistance. *(Always do a test first).*

PermaJet are proud to announce that the PermaPROtect varnishes have been independently tested and approved by a well known laboratory in the UK and established that the varnishes will not discolour or change over 85 years. Certifications of these tests can be viewed by visiting our website.

The varnishes have additionally been designed to protect from canvas edge cracking and any other environmental pollutants. When in use the varnish is milky in colour but will dry to a 100% clear finish after roller application in less than 20 minutes.

Technical Specification

- No dilution is required - ready to use instantly
- Special water based formulation guaranteeing UV protection
- Outstanding water-resistance and non-yellowing properties
- Increases colour saturation and D-Max
- Touch dry in less than 20 minutes

Application & Use

- Compatible with the full range of high quality PermaJet canvases and some fine art papers
- Can be applied easily with our special foam roller kit for perfectly even consistency

Availability & Sizes

- All varnish finishes are available in 2.5 litre cans

PROFESSIONAL VARNISH SPRAY GUN **NEW**

This 400W, electric turbine 1.5psi unit is ready to go! A complete professional spray gun system that suits all your varnish application requirements. Ideal with the PermaPROtect range of varnishes for all sizes of media coating and fine art print jobs with an extremely reliable and durable fine control.

The high performance turbine delivers a continuous and consistent volume of air that is compatible with all aqueous and solvent coatings.

The perfect tool for all your varnishing requirements, product colours may vary.

CODE	FORMAT	SIZE	EX. VAT	INC. VAT
APJ29038	Electric Spray Gun	400W / 150psi	£91.63	£109.95

"We particularly like the effect of the varnish coatings; it brightened the image, increased the depth of the blacks but retained the essential structure of the canvas weave and did not make it over-glossy or plastic the way that some varnishes can in the market place.

Overall we liked the varnishes a lot, very simple to use and it left us with a very pleasing finished print (an attribute we understand many others have also commented favourably on). We used the PermaJet High Density foam roller; do not be tempted to use anything else, the quality of the foam is important to prevent 'foaming' of the varnish.

The water-base made for very easy cleaning of the rollers afterwards and no unpleasant smells. PermaJet has concluded longevity testing of the varnish via an outside, UK laboratory and no degradation was measured after an equivalent of 85 years of exposure".

CANVAS STARTER KITS & ACCESSORIES

CANVAS STARTER KITS

Inkjet printing has evolved over the years and printing onto canvases has become more popular than ever before.

Containing PermaJet's Neptune Matt or Saturn Semi-Gloss Canvas materials, these completely unique kits have been specifically aimed at the Artist and/or Photographer who wants to experiment with canvas printing and have all the tools to hand in one kit.

As well as the tools and materials, a step by step, concise document on *'How to stretch canvases'* is also included. You will be able to produce five 12" x 8" complete canvas wraps in a traditional or contemporary style. Further materials can be purchased to make more canvases as required.

What is included in your Canvas Starter Kit?

- 2 x PermaJet Canvas Loading Sheets
- 1 x Canvas Stapling Gun
- 1 x Canvas Stretcher Pliers
- 500 x 10mm Canvas Staples
- 10 x 8" Stretcher Bars (Wedges Included)
- 10 x 12" Stretcher Bars (Wedges Included)
- 5 x A3+ Neptune Matt or Saturn Semi-Gloss Canvas sheets (to make 12" x 8" stretched canvas)
- 1 x Canvas Information Leaflet

CANVAS STRETCHER BARS

These products are manufactured from sustainable UK wood sources.

Economy Stretcher Bars

Profile size: 18mm (deep) x 40mm (wide) with smooth rounded edges to protect the canvas and print. The bars do not require any glueing for assembly and have been manufactured to absorb as little moisture content as possible whilst tensioning the corners with the aid of the FREE wedges supplied, allowing the frame to self adjust. All bars are finger jointed to avoid warp or twist.

Gallery Stretcher Bars

Profile size: 38mm (deep) x 35mm (wide). Value pack of 30 pieces designed to offer a level of professional appearance to your finished canvas. The gallery style format is most practical for fine art and photographic applications in larger volume. Made from highest quality pine, every box includes the necessary corner wedges to ensure correct tensioning.

Premium Stretcher Bars

Profile size: 44mm (deep) x 44mm (wide). Packed as pairs, these largest profile bars provide the necessary strength and appearance for any type of canvas work where Museum style reproductions are required or simply for very large work in smaller volumes.

Visit www.permajet.com for the very latest prices.

CANVAS STRETCHER PLIERS

Heavy duty chrome plated pliers with spring opening jaw. The right tool for the right job.

Visit www.permajet.com for the latest prices.

CANVAS STAPLING GUN

A manual heavy duty staple gun ideal for all your stapling needs. The all steel construction and durable chrome finish ensures a long life.

Main features include:

- Durable chrome finish
- All-steel construction
- Long lasting hardened steel working parts
- Visual refill window
- Patented jam-proof mechanism
- Easy squeeze double leverage option

Visit www.permajet.com for the latest prices.

TESTPACKS

Trying to choose the most suitable paper(s) for yourself from such a diverse and comprehensive range would have been difficult in the past.

However, because PermaJet prides itself on its customer service wanting to ensure that the consumer should get exactly the right media, a choice of inkjet Test Packs have been made available to cover the complete range. In addition, all A4 Test Packs include a FREE A7 Paper Swatch of the whole range.

FREE A7 PAPER SWATCH INSIDE EVERY A4 TEST PACK

"All that can be said of the presentation of these test packs is that they are a massive investment by PermaJet in providing affordable samples perfectly packaged, sealed and even dated together with all the required instructions and website links to ensure correct handling and FREE ICC profiling. PermaJet's range of inkjet paper & canvas is comprehensive, it's a good thing they offer Test Packs".

PIGMENT INKS

Pigment inks are the preferred choice of their extremely high degree of resistance to UV, water ingress and airborne pollutants. These are the three combining factors that result in any dye based ink system becoming unstable in a short period of time.

All major manufacturers recognise the inherent benefits of using pigment over dye based inks for the long term professional imaging market. It is the combination of these inks and our award-winning, enhanced paper coatings that ensure your images will be colour stable for more than 100 years in typical lighting conditions.

INTERNATIONAL DEVELOPMENT

PermaJet continues to develop projects with international partners, combining photographic knowledge with specialist ink science and paper coating technology.

They also continue to expand the range of pH neutral (Acid Free) cotton rag and alpha-cellulose materials that have a heavier than normal base weight and thickness.

Through their international associations they launched pigmented monochrome inks in 2000 well before most of the major OEM's had even woken up to the photographers needs. This ink technology, though not needed today gave its users the ability to produce high quality monochrome images and gave the company the knowledge to compliment their engineering skills to pioneer the launch of the very first Ink-Flow System in 2001.

HIGH QUALITY ARCHIVAL PRINT SOLUTIONS

PermaJet are members of the Fine Art Trade Guild based in London, England. Through their association with this organisation they have undergone strategic and documented tests on papers with both OEM & third party inks to ensure images meet the Guilds Standard of 6+ on the 'Blue Wool Scale'.

They have published the certificates on our website: www.permajet.com to give users confidence in the level of archive-ability of their images.

WORLD CLASS TECHNOLOGY

PermaJet's microporous coatings are applied using the most advanced multilayer technology in the world.

This coating technology has rapidly expanded to meet the growing and demanding needs to both photo and digital imaging specialists. This is where our ink/coating specialists have focused their work to bring combinations of ink and papers capable of passing the test of time and providing maximum Dmax with the widest colour gamut possible.

Our Fine Art products are produced using high grade natural cottons and bleached wood pulp processes.

They are free of lignin and acid and are buffered using calcium carbonate to absorb airborne impurities.

All materials are treated before being coated with our own proprietary formulated coating.

ENVIRONMENT FRIENDLY

PermaJet doesn't just serve the world, but is also working hard to save it.

We work very closely with four main paper mills based in the UK, Europe and the far east to produce the finest base stock from which our media is produced.

We take great care to ensure that where our papers require wood pulp, our suppliers have adopted an ecological policy of replacing trees to repopulate natural forests.

Our continued growth in producing fine art materials for archival image making uses premium quality, natural cotton which further minimises the impact on our environment.

ECO-FLO INK SYSTEMS

WHAT IS A CONTINUOUS INK SYSTEM (CIS)?

PermaJet were the first company to design and launch an ink flow system in the UK back in 2001.

The concept was born from customer feedback concerning the extremely high costs of printer manufacturers' original cartridges where, in some cases, the replacement cartridge set ended up costing more than the initial value of the printer itself!

This simple and yet extremely effective concept was, and still is, largely based upon a ribbon of ink tubes, attached at one end to an external bottle unit containing 125ml of each colour of the highest quality PermaJet inks, and at the other end, a set of specially developed 'injectors' which replace your original cartridges in the print carriage and are fed from the bottles as required.

WHY BUY OUR SYSTEM?

PermaJet's system is absolutely unique in the marketplace as it uses special injector technology, a design process which has eliminated the use of sponges or diaphragms inside the cartridge which is the basis for many third party cartridges and is the main cause of inconsistency.

The print head is guaranteed a steady and sufficient ink flow whilst providing unbeatable ink cost economy as well as maintaining high quality printing output.

The Eco-Flo systems require no physical modification of the printer's working parts and can be installed in less than 40 minutes by anyone with the aid of the step by step fully illustrated instructions.

UNIQUE INJECTOR SYSTEM

An injector system that is totally sponge less - guaranteed consistent printing time after time.

UNIQUE TUBE CLAMPING CLIPS ON EACH INK TUBE

These serve two key functions, not available on any other CIS system, by clamping off the tube and removing the bottle cap, inks can be topped up without any introduction of air into the system.

Unlike other CIS systems, the Eco-Flo can be left unused for prolonged periods of time by clamping off all of the colours; this stops the natural gravity retraction of the inks to the bottles and in turn prevents absolutely any possibility of air being drawn up into the print head and causing a need for excessive head cleaning and ink wastage.

NO PRINTER MODIFICATIONS

A simple step by step self-installation usually takes around 40 minutes with absolutely no modification to the integrity of your printer.

DOES THE INSTALLATION VOID MY PRINTER WARRANTY?

A common question with a simple answer, "No". Under a statutory 12 month warranty provided by law, the use of PermaJet's Eco-Flo system is no different to using a third party cartridge as no modification of the printer takes place. However, when taking out extended warranty policies, always check the small print! If in doubt, information should be readily available on your printer manufacturers' websites or talk to us first.

LOWER INK COSTS

Genuine savings of 80% over and above the use of the printer manufacturers' cartridges. You use 100% of the ink you pay for whereas around 15% of genuine inks remain in the 'empty' cartridge when the printer software asks you to replace it.

FULL SETS OF AT LEAST 125ML OF EACH INK COLOUR INCLUDED IN THE PRICE

Some of PermaJet's competitors offer lower kit prices but don't be fooled by the lower initial ink volumes that they include, their systems always work out much more expensive when compared like for like, so with PermaJet you receive double the volume of inks but not double the price.

A FULL 2 YEAR SYSTEM GUARANTEE

PermaJet's confidence in the system's reliability is backed by its exclusive 2 year parts or replacement guarantee. This is in addition to the free advice and helpline always available to any PermaJet Eco-Flo owner.

Does not include the Epson Printer which is covered by the manufacturer's original 12 month statutory warranty from date of purchase or any extended warranty you may have purchased from the printer supplier.

MAINTAINING THE VERY HIGHEST QUALITY

PermaJet is the only non-printer manufacturer in the UK to have had all its inks independently tested and fully certificated for lightfastness proving compatibility with both OEM and its own inkjet papers. Full details of these test certificates are available for viewing on the website.

FREE PERMAJET TEST PACK

Every Eco-Flo system includes a FREE Digital Photo Test Pack, containing 30 sheets of 7 different paper types for you to try in your own printer with the PermaJet inks.

FREE CUSTOM ICC PROFILES

Get the most out of your images when using PermaJet papers with our FREE custom ICC profiling service, guaranteeing your colours will be right.

WHAT'S INCLUDED?

All Eco-Flo systems come complete with everything that you need, including a full set of inks. System includes:

- Complete injector set
- Full set of 125ml inks
- Complete with bottle tray and tube support unit if applicable
- CD with installation instructions
- FREE generic ICC profiles
- FREE Digital Photo Test Pack
- FREE A3 50 Pack of Digital Photo Paper

Custom profiles are available for all PermaJet papers, visit our website for more information on this unique service.

Inks Approved & Tested for Consumer Confidence & Reassurance. PermaJet are the only paper and ink manufacturer to have their pigment based inks independently tested by an approved laboratory in the UK. Tested and accredited by UKAS Laboratory (Shirley Technologies Ltd – Wiratec) for fade resistance under normal display conditions printed on PermaJet Fine Art Media with PermaJet and Epson inks. The tests conducted by UKAS approved laboratory show the results as meeting the Fine Art Trade Guild standards of 6+ on the "Blue Wool" scale, stored in normal viewing conditions this translates to 85 years+ in true life conditions.

Please visit our website to view these test reports or alternatively call the team to have these e-mailed to you directly.

ECO-FLO FOR EPSON R3000

The waiting is now over... Here it is... the all new PermaJet Eco-Flo Ink System for the Epson R3000, developed and fully tested over many months and it's a winner yet again! Start saving up to 80% off all your ink costs on this printer.

The PermaJet R3000 Eco-Flo ink bottle system is unlike other cheaply manufactured far eastern systems on the market today that require injection needles to fill the cartridges on a very frequent basis as well as awkward ink level resetting procedures. Our tests concluded that these cheaper systems use microchips with small battery cells with very limited life, so when flat, they leave the user with no alternative other than to purchase a complete set of new refillable cartridges! Couple this with the annoying air pockets introduced when refilling means that the PermaJet Eco-

Flo bottle system offers an appealing consistency and reliability.

The PermaJet Eco-Flo has been specially designed with moulded cartridges that simply slot into your printer in the usual way and stay in situ permanently. Refilling is then carried out simply by topping up the external reservoir bottles therefore avoiding unnecessary wear and tear on the cartridges & microchips.

Every injector cartridge has a simple single push button attached to its microchip which immediately resets the ink level back to full on the printer's display.

Once filled and set, you are ready to print and start saving money on your ink costs with consistent print quality time after time!

The kit includes the very latest inks - PermaJet have been improving

existing ink technology and the result is the specially formulated Image-Life® pigment inks which have been successfully tested for archival stability on various Epson printers.

Image-Life® inks are manufactured with professional quality and performance in mind - ultra fine pigments designed specifically for inkjet applications with a new fast-acting, instant dry formula. They deliver the very best colour vibrance, highest print quality, extended image stability and are guaranteed to be a close match to the printer's original OEM inks.

FREE! – A3 50 sheet pack of PermaJet Digital Photo paper with every complete 125ml Eco-Flo System purchased

* Special Notes: PermaJet supply a modified replacement cartridge lid & cartridge bracket as removal of the Epson Cartridge lid is required during installation (Only applicable for Epson R1900 & R2880 printer models). Competition 1 & 2 - Epson Cartridge lid must be removed during installation, no replacement cartridge lid or bracket is supplied therefore you are unable to re-install the original Epson cartridge lid back in situ. The table above highlights the benefits & disadvantages of ink systems that are available within the UK market, please be aware of the cheaply manufactured, far eastern ink systems used by all other UK suppliers.

** NOTE: The Comparison table uses information gathered from competitor's websites and deemed correct at the time of going to press 01/02/2014. The table is based upon being purchased for an Epson R2880 Photo Printer where the equivalent CIS system exists.

ECO-FLO REFILLABLE CARTRIDGE (PRC) SYSTEM

FOR THE EPSON™ PRO 3800/3880

The nine specially designed and moulded cartridges simply slot into your printer in the usual way. They can then be injection filled with their respective inks (9 x 125ml supplied) via the permanently accessible top filler holes thus avoiding the need to remove the cartridges and put unnecessary wear and tear on the sensitive microchips. Once filled to the graduation marker, insert the special pressure cap and turn to lock and seal into place.

You are now ready to print - it really is that easy! When one of your ink levels registers as empty on the Epson utility monitor, simply follow the quick reset procedure, which takes about 40 seconds, and you can continue to print taking full advantage of the fantastic 60% cost savings.

- ✓ Save 60% on your ink cost
- ✓ Utilising the latest Image-Life® inks
- ✓ Formulated and developed in the UK
- ✓ Outstanding quality and performance
- ✓ Fully tested on various Epson printers
- ✓ Ultra-fine pigment technology
- ✓ New fast acting instant-dry formula
- ✓ Exceptional colour vibrance and stability
- ✓ Guaranteed to closely match the original OEM inks

KEY BENEFITS:

- Save 60% off your ink costs - typical reduction of A4 costs from 60 pence to only 20 pence!
- Guaranteed highest quality printing using the latest Image-Life inks & including free ICC profiling
- Two year product warranty on all parts & technical support package included
- No more expensive cartridge purchases, reduced ink and paper wastage
- Full sets of 125ml inks included as standard (double the volume of many other competitor's systems)

KEY FEATURES:

- Direct injection filter system ensuring consistent ink flow
- 100% Image-Life pigment inks independently tested and certificated
- Easy to refill via permanently accessible top filling channels - no cartridge removal required
- Latest resettable microchip technology incorporated as standard
- Self-install in around 30 minutes with printed and video instructions

CHIP EXCHANGE SYSTEM:

This requires the customer to return all 9 Epson ink cartridges, which can be empty, to PermaJet so that we are able to reprogram and assemble your kit prior to despatch.

CHIPPED SYSTEM:

Complete system supplied pre-chipped and ready to be installed immediately.

Even if you are not considering converting to our system right now, we may still be interested in buying your empty original Epson 3800/3880 cartridges - see our website cartridge page for details.

PRINTER MAINTENANCE

A specially developed range of printer maintenance and accessories for the photographer. These products will ensure your printer is in working condition and problem free at all times.

PERMAAIR 400ML

A fantastic product to assist photographers, studio labs and consumers who print using inkjet printers. The PermaAir Aerosol has been designed primarily to help maintain and keep printers dust free thus allowing the paper feed trays and rollers to pick up media more effectively and stay problem free.

Fine art printers in particular will find this product extremely useful in removing loose fibres by air blowing directly over the surface of the material prior to use as there is a tendency to leave fibres within the printer or on the rollers – with PermaAir the problem goes away!

This highly effective air duster will improve your workflow as well as extending the working life of your printer when used as part of your regular printer maintenance.

Suitable for all desktop and wide format printers as well as cleaning all other general day to day surfaces/devices.

APJ59007	PermaAir 400ml	£6.63	£7.95

PERMAKLEAN KIT

This completely unique kit includes everything you need to keep your inkjet printer(s) clean and in good working order meaning less potential problems and longer printer life. Incorrect or no printer maintenance will frequently lead to poor paper pickup and feeding, excess ink deposits, loose fibres and dust clogging inside, random ink blobbing and smearing or simply ink stains on the printer casing.

What does the kit comprise of?

- 1 x 400ml ReTac Can (to create your own cleaning sheets)
- 50 x A4 Cleaning Sheets (can be re-used several times)
- 1 x Pair of Latex Gloves
- 1 x Cleaning Fluid 60ml Concentrate (for removing ink stains and internal cleaning)

CODE	DESCRIPTION	EX. VAT	INC. VAT
APJ55375	PermaKlean Printer Cleaning Kit	£24.96	£29.95

The CleverClogs Universal Cleaning Kit is designed to unblock print heads which are experiencing erratic print output due to inconsistent ink flow from a cartridge or CIS system. It CANNOT cure problems with print heads where there is an actual mechanical or electronic fault of the head or printer itself. In these cases, you must consult a printer repair centre.

CLEVERCLOGS SYSTEM

The new 'smart' way to clear blockages in your print head. PermaJet print head cleaning solution and advanced clog free formula eliminates the most stubborn clogs from your inkjet print heads. It is safe and easy to use. This system can also be used if excess ink or black lines are being transferred onto your prints or even build up of dirt, paper fibres and other residues that may not be removed by normal print head cleaning cycles.

PRESERVATION, PRESENTATION & PROTECTION

PERMASEAL 400ML

A clear, water-resistant, and non-yellowing UV protective spray that will add colour saturation, increase image density and improve abrasion resistance. Suitable for all canvases, fine art papers and signage leaving a beautiful subtle sheen or higher gloss depending on what finish you desire. PermaSeal protects from dirt, ink fading, atmospheric pollutants and fingerprints as well as increasing the density of colours, particularly blacks. Always test first. Now compatible with microporous surfaces, give it a try!

Average coverage based on two coats per A4 sheet = 25 prints

CODE	DESCRIPTION	EX. VAT	INC. VAT
APJ59006	PermaSeal 400ml	£8.29	£9.95

PERMAFIX 300ML

This is a fast-drying matt spray specifically formulated to add greater UV protection & waterproofing properties to all matt surface papers. Supplied in a handy 300ml can and several coats can be applied to add as much as 30% extra print life.

Digital images will be also more scratch and scuff-resistant following treatment with this spray. Always test first.

Average coverage based on two coats per A4 sheet = 25 prints

CODE	DESCRIPTION	EX. VAT	INC. VAT
APJ59001	PermaFix 300ml	£9.96	£11.95

RETAC 400ML

A professional repositionable mounting spray adhesive which allows you to bond your images to mountboard without damaging the print itself. The glue is 100% solvent and acid free making it really useful for repeated mounting applications such as prints, stencils, paper, film, plan layouts and much more.

ReTac can also be used to clean the feed rollers of inkjet printers by removing all fibres within the printer and allowing better paper take-up.

Average coverage based on one coat per A4 sheet = 30 prints

APJ59002	ReTac 400ml	£14.96	£17.95

PRINTSAFE STORAGE TUBES NEW

Protect and Deliver your prints safely... and they're reusable!

The new PermaJet PrintSafe range of image storage tubes have just been launched. Ideal for all inkjet papers and canvases which can be rolled up and offer a robust way of delivering or handing your unmounted prints to your clients avoiding any potential damage.

The ingenious two part tube uses a secure centre 'screw together' feature which makes for easy print loading and no annoying end caps to mess with usually associated with cardboard tubes. In addition, they are transparent making image identification instantaneous without any labelling required!

The PrintSafe tubes are available in two popular maximum width formats of 17" (440mm) and 24" (620mm).

CODE	DESCRIPTION	EX. VAT	INC. VAT
APJ29260	PrintSafe Storage Tube 17" (440mm x 65mm)	£2.91	£3.49
APJ29265	PrintSafe Storage Tube 24" (620mm x 65mm)	£3.74	£4.49

All PermaJet aerosol products are environmentally friendly.

A specially developed range of protective sprays and accessories for the Artist, Photographer & Card Maker working with inkjet printers. After your precious image has been created on the very best papers, the treatment and finishing of the print is just as important as the printing itself.

SNAPSHOT FOLIO **NEW**

IMAGE STORAGE AND PRESENTATION WITH THE LOOK AND FEEL OF A TRUE PHOTOBOOK.

The new SNAPSHOT FOLIO from PermaJet allows you to store and display your prints or projects in a totally professional and easy-to-use book format. With your prints or pages held in place by the ingenious "SnapShut" hinge, this glue-free folio system offers amazing flexibility. You can insert any paper type or material in seconds, even magazines if you want to use it as a file store for an ongoing project!

If you need to edit or add a page, simply fold back the cover, remove the print/sheet, replace/insert and release to SNAPSHOT.

Whether you want to store one page or 100 pages, the super strong hinge system can hold the paper/print securely and without damage.

FOLD IT, PLACE IT, SNAPSHOT!

The SNAPSHOT FOLIO offers so many creative possibilities, with a professional appearance, and so many uses for so many people:

- ✓ PHOTOBOOK OF YOUR IMAGES
- ✓ COMMERCIAL PRESENTATIONS
- ✓ MODEL PORTFOLIOS
- ✓ STUDENT DISSERTATIONS
- ✓ GENERAL FILE STORAGE

- ✓ 100% GLUE-FREE HINGE DESIGN
Add, remove or interchange pages in seconds
- ✓ IDEAL FOR DISPLAYING & STORING PAPER OR PRINTS
Creates a book format for any paper media
- ✓ TOUGH, SCRATCH-RESISTANT OUTER COVER
Designed with repetitive handling in mind
- ✓ SUITABLE FOR ANY BOOK OR FOLIO NEEDS
Flexibility to create innovative presentations

See the SnapShut Folio demonstrated on our PermaJet Youtube channel

IMAGEBLOCK

TRY SOMETHING NEW THIS YEAR WITH IMAGE-BLOCK... ***THE PRINT IT, STICK IT, HANG IT*** PRINT PRESENTATION SYSTEM

This really is the easy way to produce and present professional modern, contemporary and stylish inkjet images using the high quality PermaJet range of inkjet papers – creating a 3D display format.

This modern and minimalist look is easy to create in seconds, either by hand or with the Jetmoulder laminator, ideal for the home, office, studio or exhibition use.

Image-Blocks are available in a smooth black edge finish in the following range of sizes: 6" x 4", 5" x 5", 7" x 5", 10" x 8", 12" x 12", A4 and A3. Larger sizes also available, please see our website for the full list.

To use the system, simply peel off the self-adhesive backing, carefully position your image onto the sticky area and press down firmly using a soft cloth.

To complete the process and finish the image off neatly, simply turn the printed image face down on a clean cutting mat, use a scalpel to trim flush around the edges removing the excess paper material. Your Image-Block is now ready to hang or stand in, either portrait or landscape format, using the pre-fitted hanging eye hooks (formats smaller than 10"x8" are desk standing only) and your creative work will be admired by all.

Note: Image block size might be slightly smaller to allow for printer edge trimming/cropping.

ANTI-CURL ROLLER **NEW**

The Anti-Curl Roller has been specially designed to take the typical curl out of prints and posters printed on roll media in minutes!

This first-of-its-kind accessory provides an ingenious solution to the common curling problems associated with true fine art inkjet roll materials, annoyingly costing wasted time and money to your business.

By simply using the anti-curl roller device, you can take the curl out of inkjet prints and fine art papers in seconds without causing any surface damage or creases to the printed images.

The general principle in the way it works is one of reverse rolling. Simply lay out the white carrier film which has virtually no curl memory and lays almost perfectly flat time-after-time (even after having been wound tightly around the chrome-plated central roller tube). It attaches to the tube with a special, 'no seam' ridge that might otherwise cause a crease mark on a print. Place your curled paper on top and gently roll across a work top or desk until fully wound around the roller tube. Once unwound again, the paper is super flat, free of any damage!

As a unique feature, the white carrier film also incorporates a grey edge strip down both sides creating a space to allow the rolled paper to naturally 'slip' as it relaxes and uncurls.

This is beautifully designed and well-built. It will give your prints from roll paper the finished look and professional edge it really deserves. A product which will quickly pay for itself!

All sizes of roller can accommodate prints up to 70 inches long by their stated width.

GREETINGSCARDS **NEW**

Be part of the massive Greetings Cards and Postcards market with these brilliant new additions to the PermaJet inkjet media range which you can print through any standard inkjet printer.

PermaJet has developed cards using quality inkjet media which allow you to be able to reproduce and sell your precious images or artwork at a premium price. The card has been coated with a high quality ink receiving layer which works well with dye or pigment based inks. Even more useful is that the reverse side can also be printed on for textual purposes with personalised messages and greetings and avoids the usual problem with ink bleed or similar.

A choice of 6" x 4" Postcards - the only inkjet coated media with a pre-printed "postcard" layout on its reverse so that half the job is done for you - and a choice of two greetings card sizes of A5 and A6 which are supplied pre-creased and along with all their envelopes and cellophane sleeves so that you can present them for sale with your images on the front.

A breakdown of the costs of creating your very own 'giclee' quality fine art cards.

Costs are correct as of January 2014.

	MATT/MATT A5	GLOSS/MATT A5	MATT/MATT A6	GLOSS/MATT A6

GREETING CARDS **NEW**

PermaJet's new greetings card range is a fantastic way to print inkjet images, artwork, photos, pictorial sketches and much more, ready to give to friends, family, colleagues and customers as beautifully personal gifts, whatever the occasion.

The professional quality expected from PermaJet products continues in this new range. From the coating technology to the acid free base which allows outstanding, pin sharp results, this media will not disappoint. Its heavyweight look and feel make it suitable for the great range of different artistic styles as well as being 100% compatible with pigment and dye based inks.

Choose from the high quality 300gsm Photo Smooth Gloss or the luxurious 270gsm Ultra Smooth Fine Art Matt surfaces. Both options are supplied pre-creased in their centres with a reverse/internal matt surface, designed to allow you to print text or write directly onto with your personal message.

Every pack is made complete with the appropriate number of white envelopes and clear self adhesive presentation bags for that all important perfect finishing touch. Available as...

- ✓ A4 pre-scored, to make A5 cards
- ✓ A5 pre-scored, to make A6 cards

Ideal for all craft-artists, hobbyists, enthusiasts and photographers, whatever the occasion - Christmas, Birthdays, Weddings, Christening invites, Easter celebrations, Halloween greetings, Valentines, Fathers or Mothers day, they really are the perfect cards for all occasions all year round.

POSTCARDS & CREASING TOOLS **NEW**

POST CARDS - GLOSS 300 6"x4" **NEW**

PermaJet Postcards are a fantastic way to print inkjet images, artwork, photos, pictorial sketches and much more, ready to give to friends, family, colleague's and customers as beautifully personal gifts, whatever the occasion.

The high quality photo smooth gloss 300gsm front is ready for printing with a back-printed postcard format on the reverse side, ready to hand write directly onto or overprint. Compatible with pigment and dye based inks.

The surface delivers professional quality in every sense from the coating technology to the acid free base allowing outstanding and pin sharp results with a heavyweight look and feel, suitable for a range of applications and artistic styles.

The reverse side already has a pre-printed postcard layout on it allowing you to use immediately or hand write your personalised message onto it.

It works wonderfully as postcards, invitations, personalised gifts and fine art reproductions.

For those artists that are looking to sell their reproductions or photographs, the option to purchase PermaJet's translucent presentation sleeves are the perfect compliment to your postcard media.

Available in a true 6" x 4" (152.4mm x 101.6mm) format with pre-printed postcard style format on the reverse of the matt surface.

APJ24520	6" x 4" PostCards - Gloss (backprinted with template)	25	£10.79	£12.95

PRESENTATION SLEEVES **NEW**

For those artists or photographers that are looking to sell their reproductions or photographs, you have the option to purchase PermaJet's translucent Postcard presentation sleeves - the perfect complement to your PermaJet postcard media.

They allow handling of the cards without annoying fingerprints or marks and certainly add extra value to your work when selling the products.

CODE	ENVELOPE SIZE	PACK	EX. VAT	INC. VAT
APJ24525	6" x 4" Presentation Sleeve (For use with Postcards)	25	£12.46	£14.95
APJ24530	Postcards & Sleeves Bundle Pack	25	£22.46	£26.95

HAND HELD SCORER **NEW**

This simple, yet effective, tool will enable you to make crease impressions in any paper material (with the aid of a straight edged ruler or similar). Apply the required pressure and run along your ruler a few times and crack-free paper folds can be made in seconds.

CODE	PRODUCT	PACK	EX. VAT	INC. VAT
APJ24531	Hand Paper Scorer	1	£11.63	£13.95

A3+ PAPER CREASER **NEW**

This manually operated desktop creasing solution allows you to easily produce personalised greeting cards for the print, craft & graphics industries with the most precise and highest quality results.

The device uses a pair of unique, repositionable magnetic guide blocks which enable quick and definitive positioning with the utmost accuracy. Constructed from the very highest quality powder-coated steel, a clean crease is guaranteed time after time using thick or hard papers/card up to 450gsm weight (approximately 1.5mm thick) and with a maximum crease length of 525mm.

The sprung loaded pressure bar means that you don't need to apply very much pressure even when working with the thickest card.

You can adjust the clearance depth of the crease bar which will apply clear lines, even on standard photocopy paper and this feature eliminates the possibility of cracking the coating of more delicate media such as digital fine art inkjet papers.

Technical Specification:

- Robust, all steel construction
- Max creasing size 525mm (A3+)
- Max card weight 450gsm
- Spring loaded pressure lever
- Full Instructions
- Net Weight 7kg
- Overall Dimensions: 600mm x 533mm x 130mm

A great tool for using in conjunction with the PermaJet SnapShut Folio books and making your own personalised cards.

APJ29210	A3+ Paper Creaser	525mm	£83.29	£99.95

ICCPROFILING

WHAT IS AN ICC PROFILE?

The profile makes the printed colours match what you see on the screen and therefore, a true representation of the original colours of the image when it was taken.

A profile is essentially a small instruction file within which are contained a series of coded correctional commands and data, when loaded into its associated program, these commands are activated and create many adjustments to colours, brightness and saturation to the output device whether it be a monitor or a printer.

And if you're wondering, ICC simply stands for International Color Consortium (website: www.color.org).

WHY ARE MY COLOURS WRONG IN THE FIRST PLACE?

There are three stages to ensuring that your inkjet printing is colour correct.

Stage 1: begins with the camera or scanner device. When these capture an image with their light sensitive 'eyes', they all interpret colours in slightly different ways owing to varying light sources or reflectance. Many cameras and devices capture in a colour space called sRGB as a default which is ideal for your monitor and suits its ability

to display the colours as closely as possible to the original. Monitor profiling is not the same as printer/paper profiling and so these are usually created using one of the many monitor profiling devices available on the market. PermaJet offers a wide range of the best monitor profiling products currently available - visit www.permajet.com for more information.

Stage 2: is one of the most overlooked areas of colour correction. All monitors interpret and display colours differently, very much like a television screen. How many times have you walked into an electrical store and viewed a row of television screens that all show different colours, densities and contrast levels (even between the same models or manufacturers)? Profiling your monitor to make sure it shows you colours as true to life as possible means that any adjustments you make are making your image better and not worse!

Stage 3: is the most important area which always needs to be addressed by profiling. In many cases, many photographers don't even realise that their colours are printing incorrectly until the prints are viewed under varying light sources. Without the use of an ICC profile to harmonise the printer, paper and ink combination, you will experience great frustration when trying to produce digital inkjet prints that closely replicate what is seen on the monitor screen.

WHY DO THE COLOURS THAT I SEE ON MY MONITOR NOT ALWAYS MATCH MY PRINTS FROM THE PRINTER?

The printer, ink, and paper combination will all contribute and have an effect on your final prints. All manufacturers use different paper coatings and ink formulations which cause these variations.

The only way to correct this is to work with colour profiles whether they are generic (created on a single selected printer) as a starting point or to be 100% accurate, ones that have been custom/custom created specifically from your printer, ink and paper combination.

WHY USE ICC PROFILES?

An ICC profile will ensure that you produce perfectly colour balanced prints every time. Each paper will vary in base, texture characteristics, ink absorbency and coating layer technology so you will need a separate profile for each paper type with your printer. Profiles are extremely useful, eliminating time, ink and paper wastage.

WHY DO PERMAJET OFFER FREE, DOWNLOADABLE, GENERIC PROFILES IF THEY MIGHT NOT BE 100% ACCURATE?

Certain paper and ink manufacturers fail to provide even the most basic generic profiles. It is highly likely that without a generic profile, your colours will be wrong and if you aren't given the chance to try one, how will you ever know? Imagine your frustration, having just invested in a pack of high quality inkjet papers, you are unable to use them instantly when you put them through your printer with at least a small chance of the colours being correct! You may well end up throwing valuable sheets of paper in the bin (as well as wasted ink) all because a basic generic profile was not made available to you from the start.

PermaJet offers a wide range of generic ICC profiles for use with both original (OEM) inks and its own ink sets. These are easily downloaded by going on to www.permajet.com and clicking on the ICC profiles tab at the top of the home page.

Custom profiles are available for all PermaJet papers, visit our website for more information on this unique service.

Join our YouTube channel for ICC Profiling support.

If you are struggling to set up your ICC Profiles we recommend using our Interactive Profiling Support Service. Simply call us on 01789 739200 and request an interactive support session.

CUSTOM ICC PROFILING

WHAT IS A CUSTOM/ CUSTOM ICC PROFILE?

The use of PermaJet's FREE custom/custom profiling service is highly recommended as it guarantees a 100% colour accuracy when you print your images. In order to enjoy the very best results from PermaJet's range of inkjet papers, canvases and inks, the profiling service is specifically tailored for your paper, printer and ink combination.

If you have already tried the generic profile but require just that little extra colour accuracy, PermaJet is always more than happy to do this for you, and remember, this is a totally FREE service when using any of PermaJet's papers or canvases.

Non-PermaJet papers can use this service for a small charge (consult website for details).

HOW EASY IS IT TO USE THE CUSTOM PROFILING SERVICE?

Creating a custom profile is very straightforward, but like all high technology processes, a specific procedure must be followed carefully and full instructions or advice are always available. There are three main stages...

Stage 1: Firstly, obtain PermaJet's latest target/patch file chart that will be used to build and create your custom profile, this can always be downloaded from the website. The target/patch file chart is literally a layout of hundreds of coloured squares which our highly accurate spectrophotometer will scan and determine the colour inaccuracies, in turn creating the corrective profile.

Stage 2: In order for the target/patch file chart to be correctly printed on your chosen paper, it is crucial that both the colour management within your image editing program and within the printer driver is switched off.

If, for any reason, this remains enabled, then this will produce conflicting information on your custom target/patch files. In turn, this means the spectrophotometer misinterprets the data it sees and creates a totally inaccurate profile.

Many of today's printer manufacturers utilise different software drivers from one

printer to another, meaning that they have different methods of switching off the colour management mode. However, Adobe have made a free program available to make this job easy! We give you details of how to download this in our profiling instructions.

Stage 3: Finally, when you have printed the target patch file chart, simply post the printed result together with the completed profiling service form to us. Once received, they are scanned, the profile is generated and is then e-mailed to you as an attachment with the "How to Use and Install Profiles" document. Once installed, they will appear in the drop down menu within your editing program allowing you to select them for the paper/ink combination for which they were created.

HOW DO I PRINT THE TARGET/ PATCH CHART FILES FOR A CUSTOM PROFILE?

- i) Open the free ADOBE COLOR PRINT UTILITY from their website (see next page for the sample screenshot of it)*
- ii) Open the downloaded PermaJet target patch file within that program (always ensure you have the latest one from the www.permajet.com website)
- iii) When you open the file in the Adobe Color Print Utility, it should appear in

portrait format ready to print. Do not edit or change the size of this file as it must be kept and retained at a scale of 100% (to fit A4 size paper).

iv) Now print the patch file on the paper you need profiling and ensure you set the correct media setting, quality and switch off the colour management in your printer driver (on PC version only as per screenshots on next page – MAC computers will do this for you automatically).

v) Once printed, post the file into us to create the profile which we will e-mail back.

You are always welcome to contact technical@permajet.com about any aspect of colour management and ICC Profiling.

ICC Profiles for PermaJet papers are always 100% free but even if you are using non-PermaJet brands of papers you can join our Profiling Circle and take advantage of the profiling service too! Prices per custom ICC profile can be as low as only £5.50. See our website at www.permajet.com for the very latest information on this service.

Not all editing software supports the use of ICC Profiles and so it is always best to check in advance that your setup supports colour management. Currently, you are definitely able to create and use ICC profiles from all CS versions of Adobe Photoshop up to CS4, Photoshop Elements 3 onwards, Adobe Lightroom, Aperture, Corel Painter, QuarkXPress, and QImage amongst others. However, there are obviously slight variations in the way the settings are configured between these applications and printer drivers, so if in doubt, please call us on 01789 739200. * Users of Photoshop CS5 onwards should use the Adobe Colour Print Utility (ACPU) to print target patches, free to download from www.adobe.com.

COLOUR MANAGEMENT

We are able to provide various services and products to maximise the quality of your printing workflow. From colour management hardware such as monitor calibration devices

to our remote ICC profiling service, it's all available from PermaJet. Monitor calibration is the first step to accurate colours.

A correctly calibrated monitor is essential for colour critical work such as digital photography, fine art reproductions or graphic design. A calibrated & profiled screen gives you a trusted source for viewing your images and designs, means when you build profiles for other digital devices you can be confident in the results that are being outputted.

PermaJet stock monitor calibration devices

from all the leading manufacturers, from entry level to advanced. The whole process can take less than 10 minutes, why not view your prints in natural light indoors, day or night, with the colour corrective lighting devices that we have within our range. Colour appearance becomes distorted under standard home or office lighting and surrounding colours will impair your colour perception.

Visit: www.permajet.com for ordering or call the team on 01789 739200.

PC - COLOUR MANAGEMENT OFF IN PRINTER DRIVER

ADOBE PRINT UTILITY (PC & MAC)

PERMAJETPRINTACADEMY

For 2014, PermaJet has expanded its highly successful and exciting, one-day photographic training courses into a print academy. Several events are now held at our new, dedicated training facility in Stratford-Upon-Avon in the heart of the beautiful Warwickshire countryside.

Ideally located, free and ample parking and a wide variety of relevant photographic topics are covered in small, friendly groups of 15 - 18 delegates.

Its success has also created the need for more geographically diverse venues and so additional courses will be taking place around the UK in Dumfries and North Wales.

Courses will include:-

DIGITAL PRINTING WORKSHOP:

Location: Stratford-Upon-Avon, Dumfries & North Wales.

Everything you want to know about digital printing and output of colour & monochrome images primarily based around the popular Epson Photo printer range (but Canon and HP owners are more than welcome too!)

PHOTOSHOP WORKSHOP - FROM BEGINNER THROUGH TO ADVANCED

The courses provide a full introduction to the range of tools, filters, and image manipulation techniques available in this leading program.

LOCATION PHOTOGRAPHY

An evening walk around the birthplace of William Shakespeare in Stratford Upon Avon learning the techniques of how to work with Light and Composition.

COLOUR MANAGEMENT

Location: Stratford, Dumfries and North Wales.

Printer colour management. Printer problems and solutions. Installing and using profiles for consistent colour and quality. Test printing.

NATURE AND WILDLIFE PHOTOGRAPHY

The morning session will cover the equipment etc., required to photograph nature and wildlife including: lenses, extenders, flashguns, tripods, plus specialised nature photographers equipment i.e. hides. The afternoon session will include a visit to the local Falconry centre.

PORTRAIT PHOTOGRAPHY

This one day introduction to the art of portrait photography will provide participants with the practical experience to create stunning portraits using studio flash and available light

NEW TO PHOTOGRAPHY? YOU ARE ESPECIALLY WELCOME

The courses, unless otherwise stated are aimed at beginners or those who wish to improve their photographic knowledge and skills.

The handpicked team of tutors are all experienced and passionate photographers.

They include a number of the UK top Photographers and Lecturers.

Bob Moore.
Hon. FRPS, Hon, PAGB Executive Course Director and Organiser

Christopher Bradbury.
FMPA Professional Portrait Photographer and Tutor

Leigh Preston.
FRPS Professional photographer and Tutor

Martin Addison.
FRPS, Lightroom & Coral Painter Author and Lecturer

Peter Johnson.
LRPS Self employed photographer and tutor

Clive Haynes.
FRPS Photographer and tutor of photography and techniques

Additionally, discount and special Imaging Warehouse offers will be available on all courses.

All courses run from 10:30am - 4:30pm at our premises (unless stated otherwise). A full buffet lunch with frequent beverages is included. (All dietary requirements can be catered for, please mention when booking).

VISIT WWW.PERMAJET.COM TO FIND YOUR LOCAL UK DISTRIBUTOR OR OVERSEAS AGENT

With the proven technical experience and knowledge gained in both the darkroom and digital printing environments Nova Darkroom Equipment, formed in 1983, pioneered the development of the PermaJet professional range of inkjet papers that are well known all over the World today.

Since 1998, PermaJet has been at the forefront of Inkjet Paper and Ink development and are an accredited force behind innovations such as the Fibre Base/Baryta Paper, Ultra Smooth Digital Fine Art Papers, Bright White high dot-gain Microporous Photo Papers.

PermaJet, part of The Imaging Warehouse Group, is committed to pushing the boundaries of digital print output with its Paper and Ink development, unique Generic

ICC Profile Service, Custom Audit facility and Print management solutions.

PermaJet are so wholly committed to the quality of their products that they are the only Fine Art paper and Ink manufacturer to publish their independent certification of archival stability, gained through their association with the UK Fine Art Trade Guild.

They have developed their business to provide help and support in printing, mounting and framing your images whether you are a Photographer, Artist, Book Maker, Graphic Artist, Designer or Hobby enthusiast.

PermaJet is now one of three leading brand names owned by The Imaging Warehouse Ltd based in Warwickshire, England.
