LENS ADAPTERS FOR PL-MOUNT CINE LENSES

The new lens adapters allow for many high-quality cine lenses of different manufacturers, which use the widespread PL-mount standard, to be used on cameras with the Leica L-, MFT- and Sony E-Mount bayonet standards.

Cine lenses offer professional videographers a number of advantages over conventional camera lenses, like: stepless aperture control, the possibility of connecting video follow focus systems, a special film „look“ and in many cases a greater focus area for an extremely soft and smooth transition from field to blur etc.. The exact flange focal length of the new NOVOFLEX PL mount lens adapters can be adjusted via supplied shim rings exactly to the requirements of different cameras and cine lenses. A ring with 0.1mm thickness is mounted on delivery and rings with the following thicknesses are supplied with each adapter: 1x 0.01mm, 2x 0.02mm, 1x 0.05 mm. In addition, the adapters have a permanently mounted tripod foot with an ARCA-compatible dovetail and classic thread sizes with 1/4 „and 3/8“.

Lens adapter PL-mount lenses to Leica SL/T

Weight: 286g/10 oz
Order code: LET/PL

Lens adapter PL-mount lenses to MFT

Weight: 286g/10 oz
Order code: MFT/PL

Lens adapter PL-mount lenses to Sony E-Mount

Weight: 302g/10.7 oz
Order code: NEX/PL

After 20 years of MagicBall we let him free at last...

MAGICBALL FREE

The NOVOFLEX MagicBall has revolutionized the world of tripod heads with its exceptional design. After 20 successful years, it is now time to further evolve.

Thanks to the new inverted housing photographers achieve an enormous adjustment range of approximately 240°. Panning the camera from landscape to portrait at any time even without a perfectly aligned tripod is not a problem anymore. However, the highlight of the whole is unleashed when you remove the ball from its housing which then supports the photographer in all possible shooting situations.

In conjunction with the guide shell and the supporting foot of the **MB FREE SET** taking a photo is possible, with simultaneous stabilization, both directly to the body as well as on a variety of possible substrates. Panning for video recordings are now possible without expensive video rig systems.

For an easy entrance to the system, makes the small **BF SET** consisting of the ball itself, the supporting shell and foot.

Ball Free Set

Consisting of:
MagicBall Free ball
MagicBall Free shell
MagicBall Free support foot

Order code: BF SET

Variable tripod system TrioPod is growing

TRIOBALANCE=Q 6/8

The 2014 launch of the NOVOFLEX variable tripod system TrioPod (world's first modular tripod with interchangeable legs) caused a real sensation. Photographers worldwide were enthusiastic by the possibility to fit their tripod, on a modular conception basis, to their individual needs. With the new tripod base TrioBalance=Q 6/8 NOVOFLEX is now further enlarging the system and is offering yet another alternative to the two already existing tripod base units. The new tripod base is equipped with an integrated leveller which allows for an adjustability of 15° in all directions, a panorama panning base which permits indexing "on the fly" and a Q=MOUNT QR-unit which is ARCA-compatible.

The new tripod base TrioBalance=Q 6/8 is not only recommended for panoramic photographers but for all photographers who put the value on a particularly compact and space-saving tripod system. When using your camera with an L-bracket it can be coupled and turned rapidly from portrait to landscape. A horizontal, precisely aligned rotation thanks to the panorama panning base and the leveller is possible.

The modular design of the TrioPod/system with its ingenious base elements (TRIOPOD, TRIOBAL and now TRIOBAL=Q 6/8) can be easily and quickly equipped with different legs to turn it into a perfect tripod for any photographic job. Choices are sturdy legs made of ultralight carbon fiber or aluminum, each with 2 to 4 sections. There are also walking sticks that can be used as a tripod leg and mini legs for the use as a super small travel tripod, table stand or macro tripod. All leg variants can be used as a monopod as well. The tripod legs (Type 2830, 2840, 2844) have a threaded stainless steel spike which, when unscrewed, permits the use of further system accessories.

With the TrioPod All-in-One system the photographer is perfectly prepared for any situation that may arise.

Tripod base unit with leveler and panorama panning base

Weight: 668g/1.5 lbs

Order code: TRIOBAL=Q 6/8

Nikon E-type NIKKOR lens to Leica SL camera electronic lens adapter

SL/NIK

At Photokina 2016 NOVOFLEX is launching the second electronic lens adapter for the Leica SL camera, which allows for a number of electronic camera functions to be transferred to the lens. The SL/NIK lens adapter allows the connection of current Nikon E-type NIKKOR (with electromagnetic diaphragm mechanism) lenses at the Leica SL.

Currently, 13 Nikon E-type NIKKOR lenses and teleconverters are compatible with the new adapter, both fixed focal length lenses, zoom lenses and two tilt/shift lenses. The electronic Leica SL adapter, as its counterpart for Canon - naturally "Made in Germany" - supports the following functions: autofocus, aperture control, AF/MF mode and the depth of field indicator (MF). In addition, the EXIF data for aperture and focal length setting are transferred. The new adapter tripod collar ASTAT-CN can be used directly on the adapter when using particularly long and heavy lenses.

Lens adapter E-type NIKKOR lenses to Leica SL camera, with AF- und aperture control

Weight: 130g/4.6 oz

Order code: SL/NIK

Adapter tripod collar for the electronic NOVOFLEX-Leica SL lens adapters

ASTAT-CN

To relieve the bayonet mount of the Leica SL from strain, when used in conjunction with the NOVOFLEX SL/EOS and SL/NIK adapters and big and heavy lenses, we recommend using the new adapter tripod collar ASTAT-CN.
